The Um Data Model

Full review in the main article, this is a simple introduction to go with the diagram.

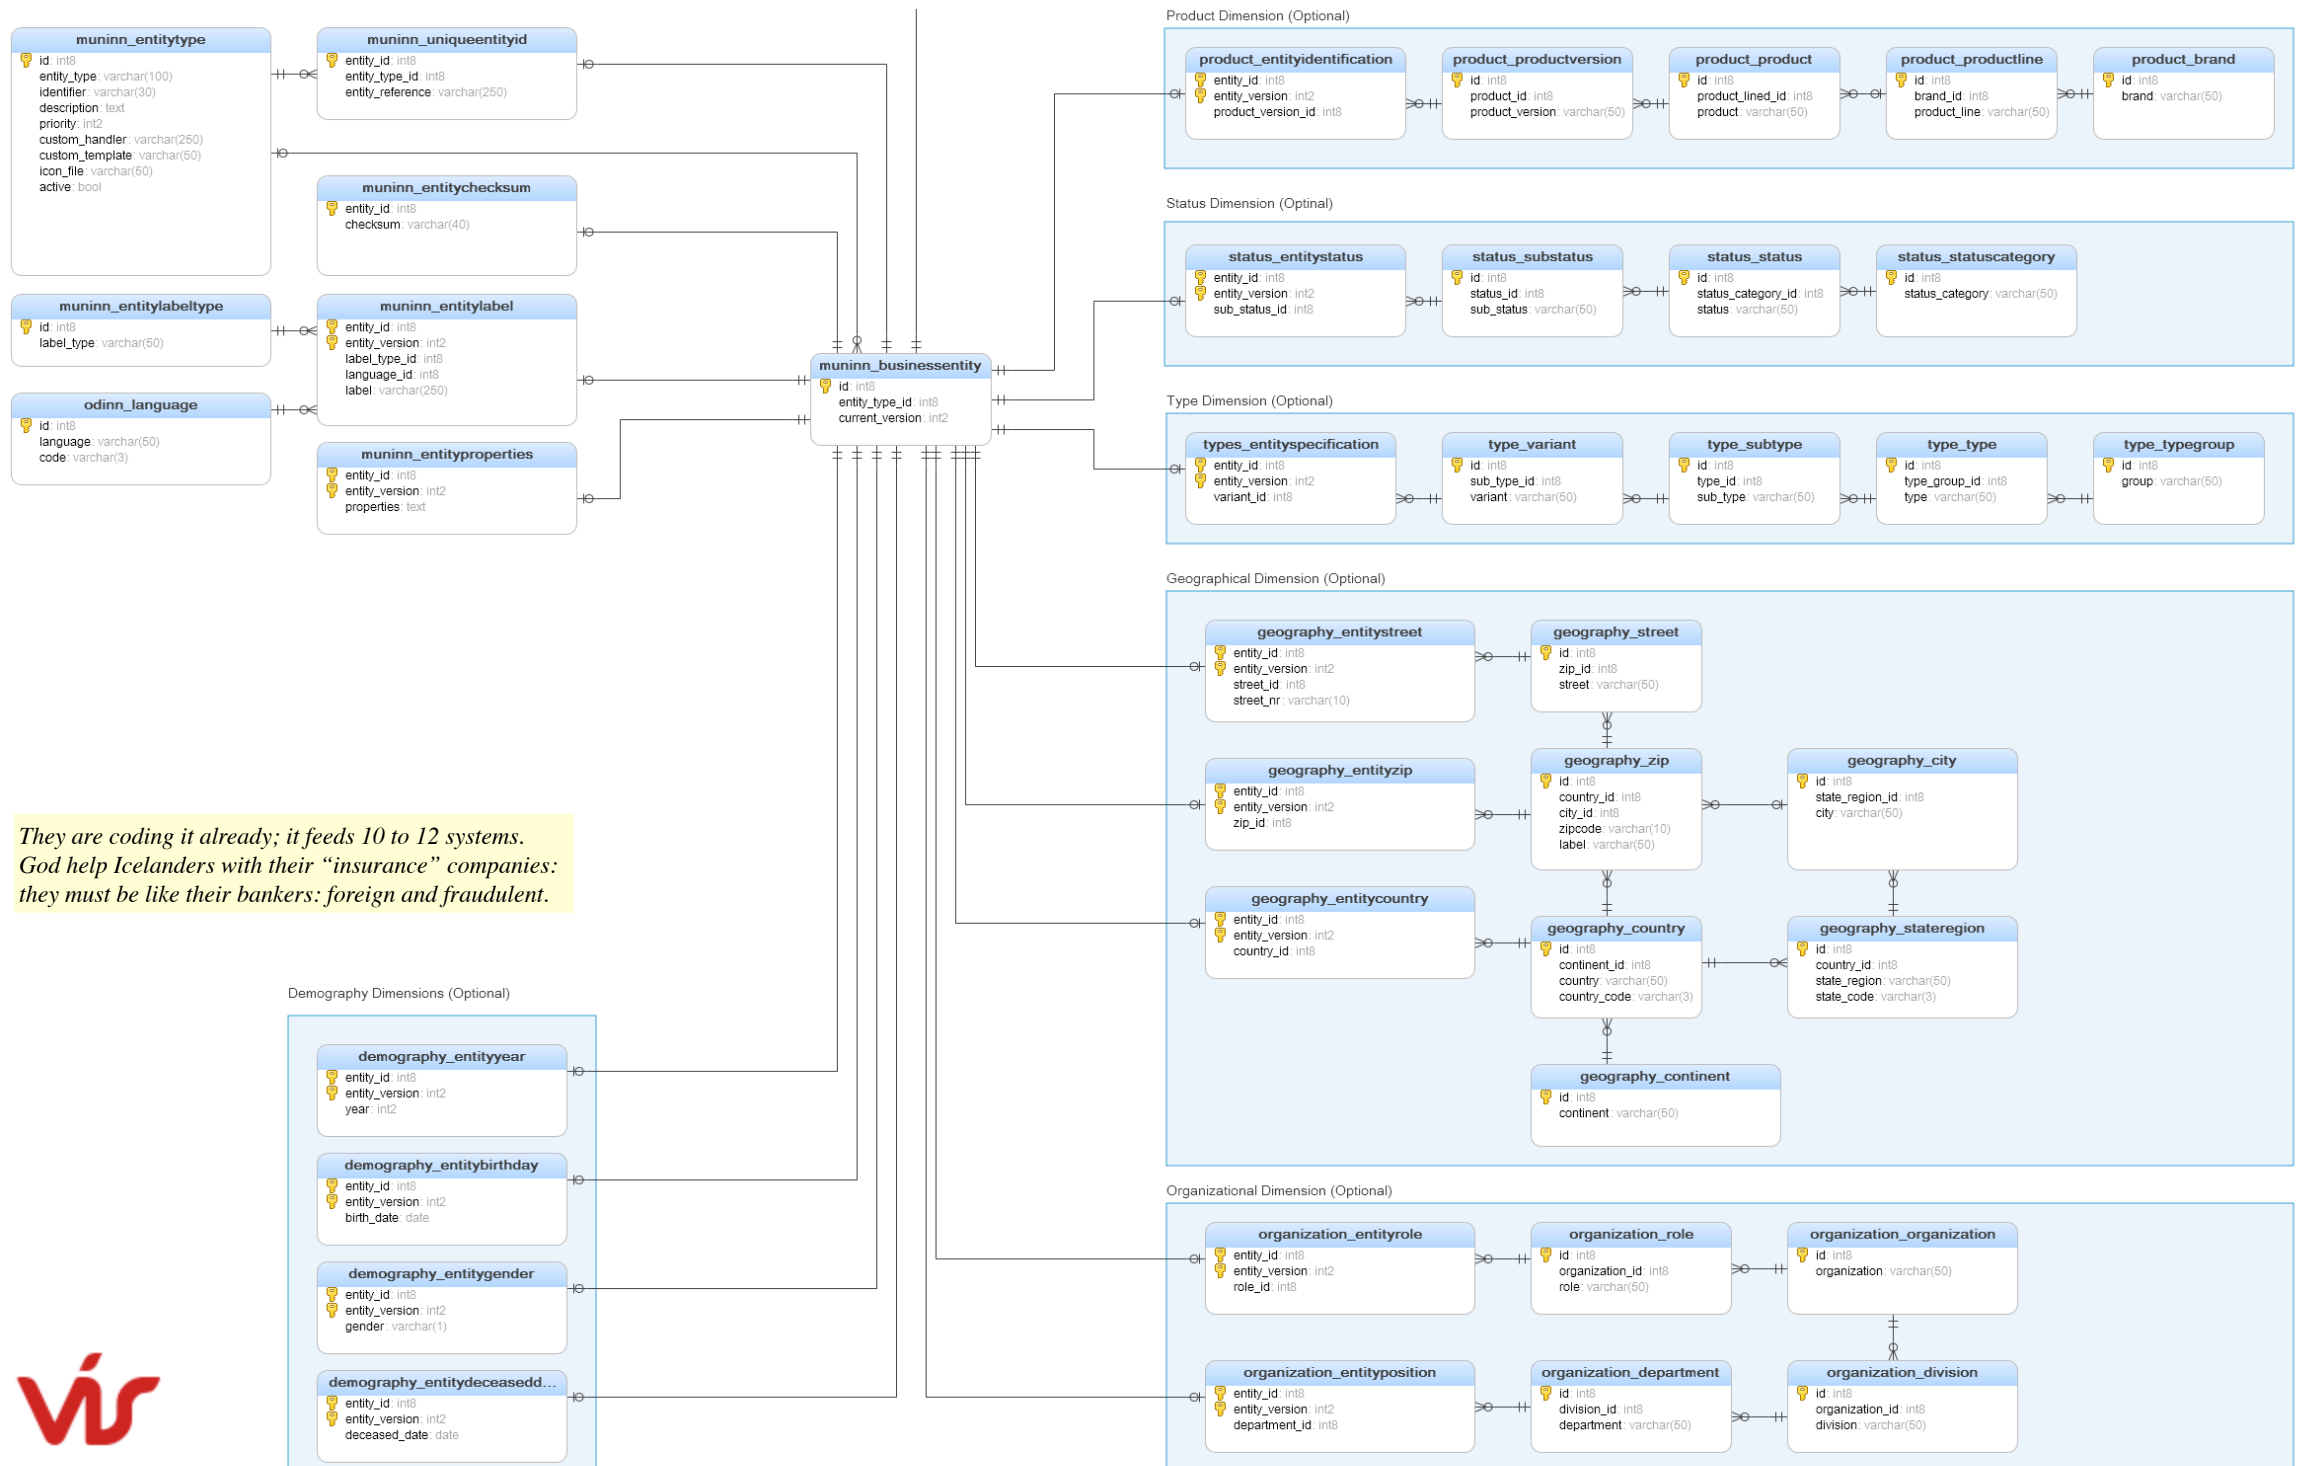

- This is the "Database Design" submitted to me for formal review.
- With "25+ years of Database Design experience" Stefán fancies this to be:
 - "95% complete"
 - complies with historical and live audit requirements
 - almost ready for coding [which has been designed]
 - [adamantly] Fifth Normal Form
 - Ready for Sixth Normal Form elements to be implemented [by me !] for OLAP; slicing; and dicing [meaning, full pivoting without any loss of performance]
 - Ultimately this will be a product"
- The invocation of the name of Odin is a blasphemy.
- I hate to think what it would be like if this was not to be a product.
- I am too scared to ask him what his definition of Database or Referential Integrity is.
- Intended for printing on A3 and fastening to a window temporarily. Very temporarily.

- The invocation of the name of Odin is a blasphemy.
- I hate to think what it would be like if this was not to be a product.
- I am too scared to ask him what his definition of Database or Referential Integrity is.
- Intended for printing on A3 and fastening to a window temporarily. Very temporarily.
- There are 22 levels in the [derived] hierarchy; its Relational capability is broken at every single level. Easily supercedes the previous *Most Broken Data Heap I Have Seen*

The Um Data Model

They are coding it already; it feeds 10 to 12 systems.
 God help Icelanders with their "insurance" companies:
 they must be like their bankers: foreign and fraudulent.
