Note

- `Broadcast` is the single discrete broadcast or projected unit.
- `Merchandise` is the sale-able unit, which may be a collection of `Broadcasts`, a `Series`; etc.
- `Broadcast.Broadcast` is your `Title`
- xxx is a temporary attribute, a simple method to make `Broadcast` (which has the same `Title` in unrelated `Broadcasts`; `Series`; etc) unique.
  It is to be replaced by the attributes that make `Broadcast` unique in reality.
- Likewise, (`Series`, `Year`) may not be unique, it requires additional attributes.
